The Rimage Producer III 7100N & 8100N disc publishers are the ultimate in unattended, backoffice CD and DVD disc publishing. With 2 or 4 CD/DVD recorders, these publishers are perfectly suited for high-volume, multi-user environments.

Everest 600 Printer

The new Rimage Everest 600 Thermal Retransfer Printer delivers photo quality images and sharp, clear text that customers demand, all at 600 dpi.

The retransfer print technology results in printed images that are scratch proof, water proof, fade resistant, UV protected, and will look good and last the life of the disc. Using specially coated media, the Everest 600 is able to print from the outer edge to the inner hub, taking full advantage of the media surface.

Embedded System

The optional embedded Windows PC makes these publishers fully networkable. Anyone on your network can send jobs to these publishers. Jobs are queued and produced automatically. All you have to do is keep it loaded with discs and printing supplies.

Producer Software Suite

The 7100N & 8100N Publishers include a full array of software for creation and control of your disc publishing system:

- CD Designer: Easy-to-use application providing the ability to create, import and customize the graphics that will be printed on the CD or DVD surface.

- QuickDisc: Software for the preparation and assembly of disc content and disc graphics, job submission, and job status monitoring.
- Production Server: Enables the full use of system resources via asynchronous control of the recording, printing, robotics, movements, pre-mastering and staging of images.
- Rimage System Manager: Provides access to system level preferences, queuing and priority options and other global system management controls for production monitoring and system administration.
